Fishes in the Lake

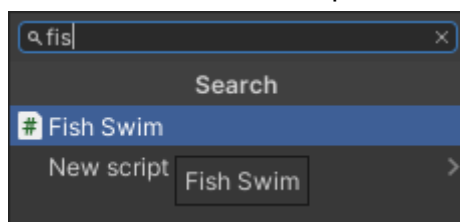

Place the little fish in a lake (pond or aquarium)

The important thing is that there are colliders on the lake's edges, as the fish will turn whenever it approaches the border to stay within the lake.

To add third-party fish models, follow these steps:

1. Add the **FishSwim** component/script.

2. If necessary, adjust the **Frequency** and **Amplitude** values to achieve a natural swimming behavior.
